

Bring the idea. Build the program. Keep it going.

Just Listen to Nature helps universities, workplaces, design teams, and other organizations move from an outdoor-space idea to a practical nature-based program, complete with working materials, project support, relevant expertise, and secure spaces for approved collaboration.

Universities Begin with a lecture, pilot, course, or teaching-garden program supported by curriculum, session plans, evaluation, and staff guidance.	Workplaces Start with a workshop or short pilot, then prepare the materials and internal team needed to continue.
Design teams Plan how people will use the garden, including activities, accessibility, operations, staffing, and maintenance responsibilities.	Professionals Show relevant work, share knowledge, find collaborators, and receive private invitations to suitable projects.

THREE PRACTICAL STARTING POINTS

University Therapeutic Horticulture Pilot A focused pilot with program overview, session plans, facilitator guidance, evaluation tools, and next-step recommendations.	Workplace Pilot Series A four-to-six-session employee program with activities, materials, communication, feedback tools, and a continuation plan.	Program-Ready Garden Brief A working brief connecting intended users and activities with accessibility, functional space, operations, and maintenance needs.
--	---	--

The public choice, the working project, and the right people stay connected.

1. Public website	Understand the options, choose a practical starting point, and begin a conversation.
2. Just Listen to Nature Admin	Organize the project, program documents, milestones, responsibilities, and team.
3. Client Portal	Give clients a secure view of their selected program, progress, actions, meetings, and approved materials.
4. People, Plants & Place Network	Find relevant expertise, share professional work, and invite confirmed collaborators privately.

PRIVATE BY DESIGN

Clients and confirmed professionals see only the project information and materials shared with them. Public explanations use clearly fictional examples and do not expose private project data, accounts, or credentials.

Bring the idea. Build the program. Keep it going.
